

Cyklop ES 600

The advanced pallet strapping system -
ergonomical, simple and reliable

Conventional, semi-automatic pallet strapping systems take the packing strap under the pallet through a rigid, fixed lance with a set lance length. Such systems take up considerable space and generally have to be installed as stationary equipment. In addition, strapping various sizes of pallet is only possible to a limited extent with such apparatus.

To solve this problem, the new ES 600 has been developed. Advantages:

- Back-relieving, ergonomic strapping in the standing position
- Easy operation: the strap is reliably slipped round the pallet simply by turning the hand crank. No risk of twisting.
- Time saving: halved strapping time of an Euro pallet (with two strappings)
- Saves staff owing to one-man operation
- Suitable for strapping various types of pallet (longitudinal and transverse)
- Adjustable for pallet widths from 0.6 m to 2.30
- No external energy necessary (electricity, compressed air)

Every apparatus is optionally delivered with

a Cutter (cutting device) - all types of strap are cut effortlessly using a foot lever -

or

a Tool Lift (CB 130 holder) - the effort required for sealing straps round high pallets (1.0 m and above) is minimised because it is the Tool Lift which holds the CB 130

Specifications:

Cyklop ES 600 with Cutter

(with cutting device)

- Chain length 600 cm
- Dimensions of the equipment:
770 mm (width) x 1200 mm (height)
x 630 mm (depth)
- Weight: approx. 52 kg (without strap)

Dimensions of packages to be strapped:

- Width: up to 230 cm
- Height: up to 230 cm

Required pallet ground clearance:

- Standard from min. 8 cm
- Special option from min. 5,5 cm

Types of strap which can be used:

PET straps and PP straps
9 mm to 19 mm wide

Reel core diameters:

76/200/280/406

Cyklop ES 600 with Tool Lift

(CB 130 holder)

- For pallets with a height of 1.00 m upwards
- Weight of Tool Lift: 7.5 kg (without hand tool)

Subject to Modification.
